

JOSHUA RYAN B. ALTAR

Quality Assurance Engineer

Quezon City, Philippines | +63 929 1664 623 | yan.altar123@gmail.com

PROFESSIONAL SUMMARY

Manual QA Engineer with 1.5+ years of hands-on testing experience on a live production platform (PSPACE, an EASA ATPL adaptive learning system), serving as the primary QA checkpoint before releases. Experienced in functional, regression, exploratory, UI/UX, accessibility, security, and performance testing, with responsibility for test planning, execution, defect documentation, and full-cycle QA audit reporting. Have identified and documented real production-risk findings, including a missing CSRF token and successful server-side deadline-bypass verification. My front-end development experience in HTML, CSS, and JavaScript also supports practical defect investigation and root-cause triage. Currently strengthening my professional QA foundation through ISTQB CTFL v4.0.1 study and developing additional skills in API testing, SQL, modern QA workflows, and test automation.

CORE QA & TECHNICAL SKILLS

Manual Testing • Exploratory Testing • Functional Testing • Regression Testing • Smoke & Sanity Testing • Test Case Design • Test Plan & Checklist Creation • Bug/Defect Reporting • Severity & Priority Classification • Requirement Analysis • Risk-Based Testing • Security Testing (CSRF, XSS awareness, CSP, auth bypass) • Accessibility Auditing (WCAG AA) • Performance Observation (page load, asset audits) • Cross-Browser Awareness • Browser DevTools (Network, Console, Application) • API Monitoring • Git • SDLC / STLC • Agile & Scrum exposure • Jira • TestRail • Excel • HTML / CSS / JavaScript • AI-Assisted QA Documentation (Claude, ChatGPT)

CERTIFICATIONS

- Software QA Manual Testing (Hands-On: Jira, TestRail, Excel): MSTConnect Educational Consultancy, July 2026
- CS107: C++ Programming Language: Saylor.org Academy, April 2021
- Claude 101: Anthropic Education (Completed: August 11, 2026)

PROFESSIONAL EXPERIENCE

QA Engineer (+ Frontend Development) - PSPACE App *Feb 2025 – Present*

EASA ATPL adaptive learning platform (pspace.app) · Quezon City, PH (Remote)

- Serve as the sole QA checkpoint across the platform, executing structured manual test cycles (e.g., 75 test cases across 8 categories in a single module audit) covering functional, UI/UX, validation, security, and performance testing before releases.
- Author formal QA audit reports (50+ pages) with severity/priority classification, root-cause analysis, and remediation recommendations, adopted directly by the development team for release planning.
- Identified and documented high-priority security findings, including a missing CSRF token on a state-changing admin form and confirmed server-side enforcement of assessment deadlines via bypass testing.
- Ran performance and accessibility audits using Browser DevTools (Network, Console, Coverage) - surfacing findings such as page-load averages exceeding target by 80%+, unoptimized image payloads, and WCAG AA contrast failures.
- Built and maintained frontend interfaces (HTML, CSS, JavaScript), improving defect triage speed through direct familiarity with the codebase.
- Produced EASA ATPL aviation training content and supported marketing/content production workflows, contributing to a 5-person, single-organization team without dedicated QA infrastructure prior to this role.

Frontend Developer Intern - Comptrolla Technologies, Inc. *Apr 2024 – Aug 2024*

- Built a dynamic user input system and expert-onboarding frontend using TypeScript, Tailwind CSS, and Drizzle ORM, integrated with a shadcn/ui component library.
- Participated in code reviews and iterative feedback cycles, contributing to a production onboarding flow later used by the team.

Academic Administrative Assistant - EARIST *May 2023 – Aug 2023*

- Maintained grade records and documentation using Excel and Google Drive, supporting faculty, students, and administrative staff.

SELECTED PROJECT

- COT Report Analyzer - Self-built browser-based SPA (vanilla HTML/CSS/JS) for institutional forex data analysis; includes a rules-based signal engine and macroeconomic scoring dashboard pulling from public APIs (FRED, OECD). Demonstrates independent test-and-debug discipline on a multi-module codebase with no framework support.

EDUCATION

Bachelor of Science in Information Technology*2024*

Eulogio “Amang” Rodriguez Institute of Science and Technology (EARIST), Manila, Philippines
